Overview

Based in Phoenix, the overall goal of the University of Arizona Health Sciences Phoenix Campus is to link the Phoenix region with the UA Health Sciences colleges and research centers in order to promote and enhance research relationships between investigators in Phoenix and Tucson and among investigators in Phoenix.

The UAHS Phoenix Campus implements this overall goal by providing the organizational framework, staff, and scientific leadership to support and coordinate clinical and translational research in Arizona, especially among the research institutions based in the Greater Phoenix Area. The UAHS Phoenix Campus will provide IGC scientists and the Translational Genomics Research Institute (TGen) the mechanisms for accessing populations for clinical research purposes, as well management resources to run clinical trials and other population-based translational research.

The Specific Aims of the UAHS Phoenix Campus:

- To expand research by promoting new clinical and translational collaborations by brining together investigators from various institutions and research backgrounds;
- To provide the infrastructure and research support necessary to facilitate collaborative research interactions; and
- To increase the quality and quantity of Phoenix-based investigators conducting clinical and/or translational research
